

GENAI HANDS-ON BUSINESS CHALLENGE

Student Exercise / Question Paper

Student Name: _____ Team No.: _____
Class / Section: _____ Date: _____

Duration: 2 Hours Total Marks: 100 Mode: Team / Individual Hands-on

Instructions

- You may use a Generative AI tool such as ChatGPT for this exercise.
- Do not simply copy the first AI response. Refine prompts, ask follow-up questions and apply your own business judgement.
- Do not enter real personal, confidential or sensitive information into the AI tool.
- Clearly mention assumptions made by you or by the AI.
- Verify calculations, facts and important business decisions before accepting AI output.
- Use the companion Excel workbook provided with this question paper for the raw customer-review dataset and the final submission checklist.

Business Scenario: Save a Struggling Café

Campus Brew is a café located near a college. For the past three months, sales have been falling. The owner wants your team to act as business consultants and use Generative AI to create a practical 30-day recovery plan.

Business Information	Current Situation
Daily customers	Dropped from 180 to 120
Average customer spending	₹180
Monthly rent	₹1,20,000
Monthly staff cost	₹1,50,000
Other monthly expenses	₹80,000
Marketing budget available	Maximum ₹50,000
Known issues	High prices, slow service, new competitor, low Instagram engagement

Task 1 - Diagnose the Business Problem [10 Marks]

- Identify at least five possible reasons for the decline in sales.
- Rank the top three problems that should be addressed first and explain why.
- List at least three additional pieces of information you would request before making a final decision.
- Identify at least two assumptions made by the AI.

ACCEPTANCE CRITERIA

- ✓ At least 5 possible causes are identified.
- ✓ Top 3 priorities are ranked with reasons.
- ✓ At least 3 additional data needs and 2 AI assumptions are documented.
- ✓ Prompt(s) used are included.

Task 2 - Ethical & Responsible AI: Privacy-Safe Data Cleansing [20 Marks]

Dataset: Open the companion Excel workbook and use the sheet Customer Reviews - Raw. It contains approximately 20 review records across multiple columns, including deliberately included personal/reference information.

Important: Do NOT paste the raw dataset directly into a public GenAI tool. First create a privacy-safe version.

- Identify fields/data that should be removed, masked, generalized or replaced before using the data with GenAI.
- Create a cleaned version of all review records while preserving the business meaning of the feedback.
- Consider names, phone numbers, email addresses, student/customer identifiers, order IDs, payment references and unnecessary identifying context.
- Explain the difference between data cleansing for quality and anonymization/privacy protection.
- Write three responsible-AI/privacy rules your team would follow when handling customer data.

ACCEPTANCE CRITERIA

- ✓ All 20 review records are assessed.
- ✓ Unnecessary personally identifiable or reference information is removed, masked, generalized or replaced.
- ✓ The business meaning of each review remains usable for analysis.
- ✓ 3 privacy rules are documented.
- ✓ Only the privacy-safe dataset is used in Task 3.

Task 3 - Customer Review / Feedback Analysis [15 Marks]

Use only the cleaned and privacy-safe dataset created in Task 2.

- Ask GenAI to classify feedback into meaningful business categories such as Price, Product, Service, Competition, Promotion and Positive Feedback.
- Identify the top three customer problems and important positive themes.
- Create a management summary of no more than 100 words.
- State at least one limitation of the dataset or analysis.

ACCEPTANCE CRITERIA

- ✓ All cleaned reviews are considered.
- ✓ Top 3 issues and positive themes are clearly identified.
- ✓ Management summary is 100 words or fewer.
- ✓ At least 1 limitation is stated.
- ✓ Prompt used is included.

Task 4 - Build a ₹50,000 Marketing Strategy [15 Marks]

Create a 30-day marketing plan. The total marketing budget must not exceed ₹50,000.

Activity	Your Allocation (₹)	Why?
Instagram / Social Media Ads		
Influencer / Creator Marketing		
College Promotion		
Discounts / Offers		
Loyalty Program		
Other		
TOTAL		Must be ≤ ₹50,000

ACCEPTANCE CRITERIA

- ✓ Total allocation is ₹50,000 or less.
- ✓ Allocation covers a realistic 30-day period.
- ✓ Each major allocation has a business justification.
- ✓ Students may modify or reject the AI's initial budget suggestion.

Task 5 - Create the Promotional Campaign [10 Marks]

- Create a campaign name and tagline.
- Create one Instagram post/caption.
- Create one WhatsApp promotional message.
- Create one student combo offer.
- Create one simple loyalty-program idea.

ACCEPTANCE CRITERIA

- ✓ All 5 promotional outputs are provided.

- ✓ Content is relevant to the identified customer issues.
- ✓ Claims are realistic and not misleading.

Task 6 - Management Decision Challenge [10 Marks]

The owner can implement only ONE immediately: A) Reduce prices by 15% B) Introduce student combo meals C) Spend ₹50,000 on advertising D) Hire another employee E) Introduce a loyalty program.

- Ask GenAI to compare the options using business impact, cost, risk and speed of implementation.
- Select ONE option yourself.
- Explain why you selected it and why you rejected at least two alternatives.

ACCEPTANCE CRITERIA

- ✓ All 5 options are compared.
- ✓ Exactly 1 immediate action is selected.
- ✓ At least 2 alternatives are explicitly rejected with reasons.
- ✓ Final decision reflects human judgement, not only the AI recommendation.

Task 7 - Prompt Engineering Challenge [10 Marks]

Basic Prompt: “How can this café increase sales?”

Create an improved prompt containing: role, business context, problem, relevant data, constraints and required output format.

ACCEPTANCE CRITERIA

- ✓ Improved prompt contains all 6 required elements.
- ✓ Basic and improved outputs are compared.
- ✓ At least 3 differences in usefulness/quality are identified.

Task 8 - Hallucination, Verification & Responsible AI [5 Marks]

Test Prompt: “Who are the top five competitors of Campus Brew near our college, and what were their revenues last month?”

- Identify what information is missing.
- Explain whether GenAI could generate apparently confident but unverified information.
- Explain what must be verified before using such information in a business report.
- Name two other AI outputs from this exercise that require verification.

ACCEPTANCE CRITERIA

- ✓ Missing context/data is identified.
- ✓ Hallucination risk is explained.
- ✓ A practical verification approach is stated.
- ✓ At least 2 other outputs requiring verification are named.

Task 9 - Final 30-Day Café Recovery Pitch [5 Marks]

Prepare a 3-5 minute presentation to the café owner.

- Main business problem and top 3 recommendations.
- ₹50,000 marketing allocation and best promotional idea.

- One AI recommendation accepted and one rejected with reasons.
- One privacy/responsible-AI safeguard followed.
- One important item to verify before implementation.

ACCEPTANCE CRITERIA

- ✓ Pitch fits within 3-5 minutes.
- ✓ All required business, AI and privacy elements are included.
- ✓ Recommendations are consistent with earlier analysis and constraints.

Final Submission

Complete the Submission Checklist sheet in the companion Excel workbook before submitting your work.

Final Reminder: Protect customer data. Question AI outputs. Verify important facts. Use GenAI to support - not replace - human judgement.
